OBJECTIVES OF A GOOD PAY STRUCTURE

Pay Structures:

- Are an administrative tool used to ensure pay levels are internally fair, externally competitive, and cost-effective all in support of an organization's compensation strategy.
- Should create alignment between work and rewards.
- > Should reflect the company's desired position in the marketplace.
- Improve the employee experience by considering the strategic needs of the business and creating stability in current and future pay, thus creating confidence in the organization.
- Support the organization's pay strategy, creating consistent practices while easing the burden of pay administration.

DESIGNING A PAY STRUCTURE

PAY STRATEGY JOB VALUATIO - EXTERNAL -

Prioritize pay levels as a component of the holistic employee value proposition.

Also referred to as job "market pricing". The company's jobs and pay are compared to companies of similar size, industry and

JOB VALUATION JOB WORTH - EXTERNAL - HIERARCHY

location.

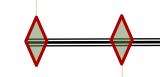

The job worth hierarchy combines both the external and internal job valuation to rank each job in order of value. This is the foundation of the pay structure.

STRUCTURE DESIGN

The structure design provides how to manage pay effectively and efficiently given a company's pay philosophy, ability of managers and human resource support.

VALIDATE AND APPROVE

Once roles are assigned HR and managers need to agree on the overall placement of roles in the structure and the communication strategy.

JOB ANALYSIS

Collect and evaluate the relevant job information at the company. Includes the job documentation process.

JOB VALUATION - INTERNAL -

Once external value is set, the company must also understand the value of the role internally. A company may wish to invest in jobs that are more critical to strategic objectives.

PAY POLICY LINE

The pay policy line shows the current state of internal pay compared to the job worth pay line. The relationship shows how current pay levels are aligned to the optimal pay practice.

ALIGN JOBS

Job alignment involves placing roles into the pay structure so managers can make effective pay decisions.

BASIC CHANGE MANAGEMENT / IMPLEMENT AND ADAPT

Ongoing communication and training is essential. Pay structures must be maintained and updated regularly. As external forces and internal needs change, the pay structure will need to be modified to accommodate.

PAY STRATEGY - COMPETITIVE PAY TIMING

LEAD STRATEGY

HIGH PERFORMANCE OR COMPETITIVE MARKET

PERIOD BETWEEN PAY ADJUSTMENTS

Lead strategy sets targeted pay levels at where they will be at the start of the next adjustment cycle.

Your pay stays ahead of the market to keep you competitive until the next adjustment date.

LEAD LAG STRATEGY

PLAYING THE "AVERAGES"
IN A FLAT OR CALM
MARKET

PERIOD BETWEEN PAY ADJUSTMENTS

Lead Lag strategy sets targeted pay levels at where they are projected to be half-way through the adjustment cycle.

Your pay is ahead of the market for the first half the adjustment period then slowly fall behind for the last half

LAG STRATEGY

LOW PERFORMANCE OR NO COMPETITION FOR TALENT

PERIOD BETWEEN PAY ADJUSTMENTS

Lag strategy sets targeted pay levels as of the beginning of the adjustment cycle.

Your pay slips behind the market during the entire adjustment period. This can make end of period hiring more difficult and retention less predictable.

PAY STRATEGY – LABOR MARKET STRATEGY

- Data may not be available for every level in a staff category or every selected scope. Your staff levels may stretch higher or lower than reported in surveys.
- Company size may be determined by financial metrics or number of employees.
- Industry may be replaced by market strategy or operational focus.

		INDUSTRY		COMPANY SIZE		GEOGRAPHY		
MANAG	SEMENT	Specific companies in industry		1x - 4x: high growth .5X - 3x: slow growth		Global or National		
PROFESS PROFESS	SIONAL	All related industries All companies in specific industry		1x – 2x: high growth 1x: slow growth		Regional, Local and industry Hub		
SUPPO	ORT	All industries		All sizes		Local		
	SCOPE							

JOB ANALYSIS

Understand enough about each position to allow accurate matching to a variety of external data sources, and efficiently compare jobs internally.

JOB DEFINITIONS

Summary of role defining key duties, skills, knowledge and behaviors.

JOB DESCRIPTIONS

Detailed description of duties, competencies, education, tasks and more.

These are compliant with the American Disabilities Act.

EXTERNAL JOB VALUATION - MARKET PRICING

Competitive Compensation Analysis (CCA)

The following process is used to populate a tool that compares internal pay levels to relevant external pay information

Selection

Identify the surveys and data cuts for each major region and critical function

Match

Link each internal job to a job in each data source.

70% overlap in essential job duties and functions is required for and effective match

Validate

HR Business Partners and other subject matter experts review and validate each job's survey benchmark match

Approve

Key managers confirm benchmarks for their reporting employees

Apply

Data is used to compare company pay to external target as defined by the company Compensation Philosophy

INTERNAL JOB VALUATION

Internal Job Valuations help determine how the company values each job independent of market perspective. In situations where market data is available, a more informal approach would be utilized.

Formal Methods:

In general there are two different methods to perform a formal Internal Job Valuation:

Qualitative

 Uses Ranking and Classification to identify the internal value of each job based Knowledge, Skills, Behaviors, and Reputation.

Quantitative

 Uses a Point Factor and Job Component to identify compensable factors using major categories such as Skill, Responsibilities, Effort, Working Conditions. This in turn helps identify the internal value of each job.

Informal Method:

In cases where External Market data is available, we would use this to place each job on a grade. Jobs would then be adjusted up or down a grade as jobs are valued less or more internally. This method only uses the grade adjustments as a secondary method after the External Market Valuation method.

JOB WORTH HIERARCHY

Establish an informal ranking of groups of jobs or individual positions and determine specific grade placement based first on external market data and second on internal value factors such as job complexity, scope, strategic importance, unique talent pool, supervision, job progression, etc.

Hypothetical example below:

Your Company Job	Base Market 50 th Percentile	Closest Grade Assignment	Grade Midpoint	Internal Value Grade Adj.	Final Grade Assignment	Grade Midpoint
Software Engineer I	\$100,000	13	\$105,000	-	13	\$105,000
Software Engineer II	\$109,000	13	\$105,000	+1	14	\$116,000

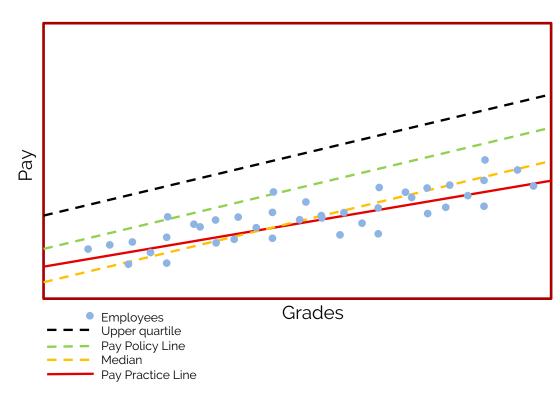

PAY POLICY LINE

This data visualization shows how actual company pay practices compare to targeted pay practices.

- ➤ The graph provides information on individual jobs and a trendline for both the defined pay structure and the actual levels paid.
- > Small inconsistencies can be seen and corrected quickly.
- Large discrepancies may require multiple adjustment cycles to bring within the structure.
- ➤ In this graph we have plotted sample current base salaries of an organization's employees vs. market median.

PAY STRUCTURE DESIGN - STRUCTURES

Determine the number of pay structures

- > The scatter gram shows clusters of jobs with similar pay characteristics from a sample Department.
- Your Company may have unique pay structures for each country. In each country there will will probably be multiple pay structures, including: Executive, Management, and Professional.
- Unique pay structures are typically necessary for each geographical region unless a geographic differential policy is used.

Your Company Professional EES
Your Company Professional Overall
Your Company MGMT EES
Your Company MGMT Overall
Your Company EXEC EES
Your Company EXEC Overall
Market Median

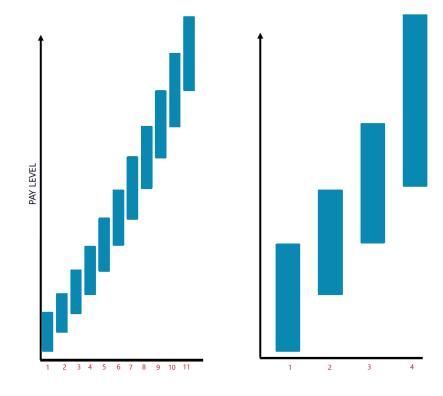

PAY STRUCTURE DESIGN - GRADES

Determine the number of pay grades

- ➤ Define how fine the distinctions between skill levels need to be (the more precise differentiation needed, the more grades will be required; the more jobs can be grouped together, the fewer grades will be required).
- > There are several factors to consider when determining the number of pay grades such as:
 - The number of supervisor-subordinate relationships in the company's organizational structure; and
 - 2. The degree of emphasis on career development and progression; and
 - 3. The resources available to administer the pay program. Generally, the more range levels, the more administration required.
- We often recommend using narrower pay ranges (spreads of 30%-50%) and more grades (rather than broad bands) to allow for more frequent promotions and a greater perception of growth and advancement. Recommendations for your Company may be different.
- ➤ The grids on the right show the difference between narrow and wide pay ranges.

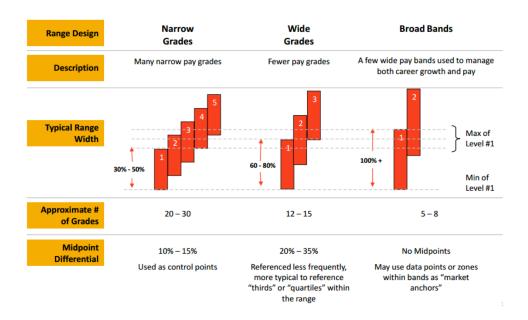

PAY STRUCTURE DESIGN - RANGE SPREADS

Determine the desired range spreads

- Range spread is also known as pay range width or salary range width. Employees in a specific grade should have base pay that falls between the grade range minimum and maximum.
- Range spreads should increase with the increase in the level of job complexity.
- Example: More narrow grades with the following range spreads:

Executives: ~60%Management: ~50%Professional: ~40%

PAY STRUCTURE DESIGN – MIDPOINT DIFFERENTIALS

Determine the desired midpoint differentials

- ➤ A midpoint differential is the difference between one grade midpoint to the next.
- ➤ The smaller the midpoint differential, the more grades and greater accuracy of pay administration.
- ➤ Typically, midpoint differentials align with an organization's promotion policy. For example, a promotion policy that limits increases to 8%, but has a midpoint differential of 15%, may cause employee salaries to fall below the new grade minimum upon promotion.
- > Example: Midpoint differentials by level

Executive: ~30%Management: ~20%Professional: ~10%

TYPICAL MIDPOINT DIFFERNTIALS

STRUCTURE TYPES	MIDPOINT DIFFERENTIALS		
Executive	20% to 40%		
Manager	15% to 25%		
Professional	10% to 15%		
Support	5% to 10%		

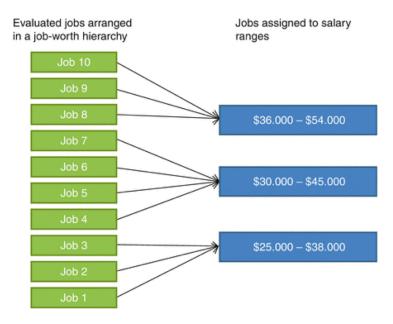

ALIGN JOBS

Finalize job placement in pay structure

- Align the pay target (based on job worth hierarchy) with the nearest grade midpoint for each job.
- Grade assignments may need minor adjustments based on the expectation of a job's future pay growth.
- "Hot jobs" are in high demand and often have pay increasing quickly.
- Some jobs may also see reduced demand that results in pay lagging other roles in the same pay grade.

Process and Execution

AN OVERVIEW OF JOB STRUCTURES

DISCOVERY

- ➤ What are we trying to solve?
 - o Provide career paths
 - Improve employee engagement and retention
 - Improve sourcing (internally and externally)
 - Limit job title proliferation
 - Governance process
 - Improved Reporting
 - o Anything else?

DESIGN: RECOMMENDED PROCESS

- Match roles to the relevant survey data
- Arrange roles into job families
- Socialize Job Structure with managers
 - Explain process
 - Verify survey matches
 - Refine the job structure
 - Create job definition
- Build detailed job descriptions

WHY THIS PROCESS WORKS

Top Down	Bottom Up
 ADVANTAGES Limits number of jobs to roles that are defined in the marketplace Time efficient, most work controlled and conducted by HR 	ADVANTAGES Requires HR to obtain a detailed understanding of roles
DISADVANTAGES Not all jobs are included in surveys	 DISADVANTAGES Extremely time consuming for HR and managers Often creates more roles that are too similar

TYPICAL JOB STRUCTURE

FUNCTION

- The major functional areas of a business that represent groups of job families.
 - o Typical functional areas are Strategy, Product, Marketing, Finance, Human Resources, Technology and Operations. (Not to be confused with business departments)

FAMILY

- > A group of related job specialties that are focused on common goals related to the function.
 - o Typical Job Families in HR are Rewards, Recruiting, and Administration.

SPECIALTY

- A sub-group of job family that further define roles of similar job functions that are common in large and medium sized companies.
 - o Typical Job Specialties in HR Rewards are Compensation, Benefits, Work/Life practitioners.

JOB

- A series of related job titles with progressively higher levels of impact, knowledge, skills, abilities (competencies), and other factors, providing for promotional opportunities over time.
 - o Typical Job Families in HR are Rewards, Recruiting, and Administration.
